

## SHY's "ZIPscreen FLAT" Receives the Good Design Award 2020

**GOOD DESIGN  
AWARD 2020**

SHY is pleased to announce that its "ZIPscreen FLAT" has won the Good Design Award 2020 (sponsored by the Japan Institute of Design Promotion). **This will be the second consecutive year that our product has received this award.**

◇**Award-winning product:** Roller Blind Screen [ZIPscreen FLAT]

◇**Product Outline:** Motorized roller blind screen with specialized fasteners on both sides will enable to have no gaps. This enables the sides to completely block out light. Also it can block heat, insects, wind, dust, air, and sound. The entire unit can be stored in the box, so it can be installed flat against the ceiling. The entire unit can be stored in the box so that it is flat against the ceiling, and the guide rail can be finished flat against the wall or pillar. The clean design can be used for all kinds of spatial purposes.

◇**Designer's comment:** Now that we spend more and more time at home, we have developed a roller screen blinds that is not only for the purpose of awning, but also for people to spend their time at home comfortably. It can also be used as a large projection screen, and since it can com shut out light completely, it can also protect your privacy without letting light leak outside. In addition, since the entire unit can be stored in the BOX, it is flat and does not obstruct the view when not in use. It is a fusion of design and safety made for children to the elderly, as well as reducing the risk of falling in the event of an earthquakes and other disasters.

◇**Judge's Comment:** The evaluation was based on the fact that this motorized roll screen has special fasteners on both sides of the roll screen and can completely block out light without any gaps on the sides, as well as blocking out heat, insects, wind, dust, air, and sound. In hotels and bedrooms, complete light shielding is often desired, but it is difficult to achieve complete light shielding with a clean roll screen, and light inevitably leaks from both sides and underneath. The use of sharp, solid, and noiseless guide rails to solve these problems is another point that I appreciated.

This is the *2nd year* in a row to receive the Good Design Award, and the *6th time* it has received the award in total.
